Dear Pamela Monroe,

As a resident of New Hampshire I hope the SEC will reject Northern Pass's certificate.

Eversource and Hydro Quebec have both said they aren't paying for the project which raises the question whether either of the companies have the financial capability to build and operate this \$1.6 billion project. The transmission towers and lines are going to have a horrible effect on the landscape, historic sites, and the environment in New Hampshire. The transmission line also will not serve our state, as it merely passes through New Hampshire.

Far too often NH has become a gateway for utilities going to the southern New England States. While it is always claimed that NH will have "good Jobs" from or lower Utility cost as a result of these utilities going through New Hampshire's sea coast or Mountain areas those Jobs and Lower costs never seem to happen.

New Hampshire has little coast line and what we have is a dumping ground and gathering place for out of state people to come and make a mess of. Along with out of state Medical waste companies who dump hazardous material off our coast only to have storms drive it ashore again.

Our mountain areas and rural areas are all we have left and those are rapidly falling to the effects of abusive recreation and utility corridors. This must stop.

I hope the committee will reject this project's certificate to prevent it from harming our state.

Thank you.
